Humanoid robots. Proven results.

Announcement

We ’ ve retooled Agility for a new era. Same core values, articulated with renewed precision. See more.

The future of automation is already hard at work

Digit is the first humanoid robot in production deployment. Arc is the cloud platform that runs it. Together, they bring advanced automation to facility floors with clear ROI. Fast mobilization. Lasting transformation. All with an eye on safety.

Explore Solutions

A field-proven deployment process that derisks your investment

Deploy Digit

Solution Setup

01

Assessing how Digit can help your facility automate

On-site Validation

02

Demonstrating results as an integrated part of your workflow

Operational Impact

03

Partnering to maintain throughput and ensure growth

Trusted by titans of industry

Vision

This generational shift has only just begun

Warehouses and factories are where we ’ ve built momentum. We ’ re staying there, and going further too. The challenges humanoids can help solve are just coming into view. Some we already know. Others we've yet to name. The horizon keeps moving, and so do we.

Setting the standard for safe humanoids

No vaporware. No hype. Just technology that works. With over a decade of experience, we ’ ve developed and deployed tools that help our partners safely automate repetitive and difficult work. Every breakthrough is aimed at the same thing: making humans more capable.

learn about agility

see safety in action

Origins

Supply chain resilient

Digit is assembled by the Agility team in Salem, OR. With roughly 80% of its nearly 6,000 parts sourced from the US we minimize supply chain shocks and deliver critical automation tools on your timeline.
